Use Science Fiction Storytelling for Successful Future Scenario Planning

On-Demand | ⌚ 1 hour

Discussion Topics:

- Why IT leaders need to embrace multi-experience, transmedia storytelling
- How science fiction provides a roadmap to your future
- Communicate future scenarios, visions and strategies that inspire action

You cannot have a discussion with someone about the future, especially emerging technologies, without eventually referring to a book, comic, television show or some other form of science fiction. These science-fiction stories help us visualize plausible futures while engaging obstacles and opportunities not yet realized or even imagined. This complimentary webinar explores why CIOs, CTOs and technology innovation leaders need to embrace storytelling techniques and maximize multi-experience, transmedia, and science fiction storytelling strategies to effectively communicate future scenarios.

REPLAY

As they face unprecedented disruption, HR leaders feel building pressure to meet shifting skill needs. While the number of skills required for a single job is increasing by 10% year-over-year, 33% of the skills needed three years ago are no longer relevant. In this webinar we will focus on how the best organizations are shifting from merely *responding* to changes in skill needs, or trying to *predict* future skill needs, to a *dynamic* approach that enables their organizations to quickly and effectively align with change. In this webinar we will look at one of the three main things leading organizations are doing to take a responsive approach - identifying and implementing skill accelerators to develop skills at the time of need.
